

CAPBs[®] set Heating system check sens

Part no. P00067

CAPBs[®] set

benefits

- complete set for performing 4 Pa test in buildings
- robust, modular system case S, suitable for box and shelf system Sorti-mo-Boxx
- wireless, immediate transmission of the measurement data to your AFRISO measuring instrument, smartphone or tablet with Bluetooth[®] technology
- position-independent, temperature-compensated sensor technology for maximum precision in all measuring scenarios
- free app for EuroSoft live for operation of all CAPBs[®] via smartphone and tablet. With pre-installed measurement menus for special applications and graphical representation of the measurement results

Application

Measurement of the flow rate and determination of the temperature in the residual core flow of the flue gas line.

Description

Ready-to-be-used set in system case S with sensor module pressure/temperature CAPBs[®] sens FP 10 (20 mbar), Pitot tube and surface temperature probe. The measured data is used to calculate the ventilation loss. If the channel cross section is known, it is possible to calculate the volume flow. The measurement results of the surface temperature probe serve as the basis for calculating the surface loss of the heat generator.
